Functional / Requirements Testing Discrepancy Log

This Discrepancy Log is to be used for documentation of any discrepancies (e.g. failed test cases, test case errors, testing execution errors) found during testing. These should include all test cases where the result has been set to failed.

Clarification: Discrepancies detected during a test run will be documented in the Discrepancy Log (DIL) version associated with the test run. The DIL will be created during each test run. Any updated version of the DIL showing no discrepancies serves as evidence for the successful correction of the error(s) causing the discrepancies.

INTEGRATION TESTING DISCREPANCY LOG

No discrepancies found during the execution of the Integration tests.

ACCEPTANCE TESTING DISCREPANCY LOG

No discrepancies found during the execution of the Acceptance tests.
